

LAMPSHADE CARRIERS AND SPIDERS

If you are buying a lampshade with a standard 107mm duplex ring you can use the shade on a floor or table lamp and as a ceiling light too. To connect it to the lamp holder you will need either a **carrier** or a **spider**. Don't worry, we will always send this included with your lampshade. It is easy to connect, see this simple guide.

FITTING A LAMPSHADE WITH A DUPLEX RING TO A CARRIER

If you are fitting your lampshade on a table or floor lamp, use the carrier to connect the lampshade duplex ring to the lamp holder on the base.

One end of the carrier will fit onto the lamp holder (between the threaded rings) and the other end will hold the duplex ring of the lampshade (lampshade to sit on top).

Our carriers are manufactured with a 40mm hole and a 25mm reducer ring inside, to fit both EU E27 and UK B22 lamp holders.

FITTING A LAMPSHADE WITH A DUPLEX RING TO A SPIDER

If you are connecting your lampshade to a ceiling light, use the spider to adapt the duplex ring of your lampshade to the pendant fitting.

The spider will fit onto the lamp holder of a pendant fitting (between the threaded rings) and cradle into the duplex ring of the lampshade.

Our spiders are manufactured with a 40mm hole and a 25mm reducer ring inside, to fit both EU E27 and UK B22 lamp holders.
